«Ukrhair» sell natural hair and is an ideal partner for wig and hair products manufacturers. We sell wholesale all kinds of natural hair. Our company offers you both raw hair and 100% processed hair ready for further use in manufacturing.

The key difference between washed and unwashed hair is that the latter is ready for immediate use. In the process of washing we detect no-remy hair, non-visible before washing, wash out the dirt, straighten displaced hair in the top of the ponytail and finally, only after washing the real texture of the hair is revealed. In the process of washing the hair loses approximately 15-30% of its weight. This is the primary reason why washed hair costs more than raw hair. However, if you chose to buy washed hair, you receive a product 100% ready for manufacturing thus saving resources, personnel and its qualifications expenses, and technological developments costs.

The main competitive advantage of «Ukrhair» is wide and quality range of human hair. It includes natural European hair, also labelled as Russian hair or Slavic hair, as well as hair from the Central Asian countries or so called Uzbeks hair and Asian hair.

The two last of the aforementioned «Ukrhair» Company bleach and we name them bleached hair. For many years we have been cooperating with numerous plants and factories, major enterprises and studios engaged in natural hair products manufacturing as well as with famous theatres.
European Hair Washed
European Hair Washed

This hair type is popular for manufacturing wigs and hair extensions all over the world. First and foremost, it’s really universal, as you may chose European hair to match almost every person. It boasts plenty of colours and shades and a variety of textures. European hair is well known for its quality and durability. However, there is one single quality, which truly makes European hair or Slavic hair stand out and priceless, and that is natural light shade, which has become a rarity now.

Silky and thin texture.

Advantages:
- profitable price;
- long-lasting.

Colours:
Black.
Asian Hair Bulk
Asian Hair Bulk

Integral advantage of this type of hair is its price. You do not have to overpay for Asian hair, while your hair extensions or wig will look naturally and stylishly. Due to our long-term relationship we have well-established system of natural hair collection in Asia, we select only thin hair and pay considerable attention to its quality. We sell to our partners only top-class virgin natural Asian hair.

This type of hair is collected in:
East Asian countries.

Visual differences:
Silky and thin texture.

Advantages:
- profitable price;
- long-lasting.

Colours:
Black.
Asian Bleached
Asian Bleached

Ukrhair has its own manufacture in Europe, where we bleach and dye Asian hair. We use only expensive European dyes. This type of hair becomes soft and silky after dying that enables its further usage in hair extensions. We sell quality raw natural hair of the most sought-after shades, platinum, light brown and iron grey. Absolute advantage of Ukrhair is manual processing of such type of hair, as we have a strand-by-strand approach. It is due to our innovative technology that dyed hair does not fade and spoil, creating an alternative to natural light hair. We do not cover bleached Asian hair with silicon, if the hair is spoiled and do not use any other tricks to conceal real condition of strands.

This type of hair is collected in:
East Asian countries.

Visual differences:
Soft and silky after dying.

Advantages:
That dyed hair, creating an alternative to natural light hair.

Colours:
Platinum, Light brown and Iron grey.
Asian Gray Washed
Asian Gray Washed

Grey hair is used for manufacturing false moustaches, whiskers, beards and theatrical wigs. Ukrhair sells directly both to factories, manufacturing such hair products and to famous theatres. Grey Asian hair is in demand for making wigs for elderly people.

Snow-white hair has always been in the highest demand. Its key advantage is that it can be easily and effectively dyed into any other color. In this case natural grey Asian hair is used as raw natural hair.

This type of hair is collected in:
East Asian countries.

Visual differences:
- differed by percentage of gray;

Advantages:
Can be easily and effectively dyed into any other color.

Colours:
- snow-white;
- variables percentage of Grey.
Asian Gray Bulk
Asian Gray Bulk

It is used not only for hair extensions, but also for theatre wigs and chignons manufacturing. Grey hair properties make for maximum effect when bleaching. Due to grey pigment this type of hair can easily and quickly be transformed into snow-white colour, retaining, most importantly, its superb quality. This is the main reason why grey hair is used for creating snow-white strands.

This type of hair is collected in:
East Asian countries.

Visual differences:
- differenced by percentage of gray;
- silky, wavy, curly.

Advantages:
Most suitable for soft bleaching ensuring.

Colours:
- snow-white;
- variable percentage of Gray.
Virgin grey hair, and above all 100% Slavic hair, is used as a basis. It is further bleached and dyed with different colors or shades. The structure of this hair remains unchanged and the hair remains as soft, supple and silky as before. Such hair also features a resistant pigmentation which is not washed out over a period of several years. We tested this hair at our factories and in our hair salons. Russian bleached hair is highly recommended both by hairstylists and by clients. Today we are pleased to offer this hair to you.

This type of hair is collected in:
Russia, Ukraine, Belarus, Moldova.

East Asian countries.

Range of use:
Wigs & hair extensions.

Visual differences:
Silky, wavy, curly.

Advantages:
- profitable price;
- long-lasting.

Colours:
Black.
Custom Made Hair Extensions

Buying raw hair, you may order the service of customized hair extensions. To make an order, just attach a photo of an exact copy (sample) of hair extensions. Indicate the type of hair extensions desired and we will make exactly what you need to get.

You may choose any hair extension from below mentioned products, which are in high demand all over the world: hand tied hair wefts, machine sewn hair wefts, clip in hair wefts, add-ons, chignons, capsule hair extension (keratin hair extension), tape in hair extension (polymer hair extension).

Our company offers an exclusive service of hand tied products: hand tied hair wefts, handmade capsules (hand braiding).

Hand braiding of hair wefts allows to control the number of hair to be added to each weft lock. Volume of weaved locks may be managed by size, i.e. small, medium or large. Unlike machine sewn wefts, size and volume of hand tied wefts may be custom made.

Hand capsule bonding has an advantage of opportunity to regulate the volume of weaved hair (the standard is 0.8 grams, but by hand it is possible to make it one gram).
**Clip In Hair Wefts**

Clip in hair wefts are attached to hair horizontally in several rows by means of hairclips. It is a simple and harmless hair extension technique helping your customers to change their look easily.

Clip in hair wefts have an uncontroversial advantage in that your clients will be able to enhance their haircut volume and hair length at home and on their own. Obviously, women who like changing their look from time to time will prefer these very hair extensions.

---

**Capsule Hair Extension**

Unlike weaved hair, capsule extensions allow to reduce the likelihood of difference between hair extensions and one’s own hair significantly. To achieve this effect the extensions are attached directly to one’s own original hair by means of keratin capsules. There are several techniques of attaching keratin capsules to hair strands. Hot fusion method implies heating keratin substance in order to make the extensions adhere to the hair. As for cold fusion, capsules are attached by means of glue.

The techniques have established names and Italian and English fusion hair extension techniques are so-called hot fusion methods. Spanish hair extension is performed by gluing strands. Other cold fusion methods are in common practice either, such as ultrasonic and micro capsule fusion hair extension.
Add-Ons

Add-ons is a generic name for weaved hair. They include various products. In modern understanding this term means a wide range of hair extensions attached in different ways. Add-ons are made of natural or synthetic hair. Add-ons of natural, virgin hair not subject to chemical treatment are of high quality and thus most in demand. Such add-ons are of natural appearance and care taken for them should be almost the same as for woman’s own hair. They can be washed by shampoo, dyed and moisturized. The same hair care methods as for original woman’s hair can be used. Artificial hair add-ons are much cheaper but they have restricted application. Such products must match the color of the hair exactly, yet even in case of maximum similarity artificial hair may differ from one’s own hair due to its structure.

Tape In Hair Extension

Strands are attached with a polymer tape which fact gave this method its alternative name: polymer hair extension. The extensions are attached as close as possible to the root of the natural hair allowing donor hair to blend in one’s own original hair which is similar to capsule hair extension method. Polymer hair extension grows more popular because of some advantages. The process of tape in hair extension takes three quarters of an hour on the average. It is harmless. The polymer is not subject to heating and the extensions are attached without chemical treatment. Tape in hair extension can be used for short hairstyles and thin hair. This method costs far less than the method of capsule hair extension.

Chignons

There is a variety of hairdressing and chignon-based products made of natural hair. So-called braided chignon is in high demand. Fake ponytails are often used for wedding hairdressing and for festive occasions. Ponytail chignon is attached above one’s own braid giving the hair-dress volume and length, and so allows extending variants of hairdressing. Other types of chignons such as chignon topknots, chignon fringe and chignon buns are also widespread. They all enable getting volume and length to your hair-dress, changing a style quickly and harmlessly and creating a look suited to every fancy.
Hand Tied Hair Wefts

Wigs and various hair extensions are generally based on hair which is braided in a special manner. Strands are made according to customer’s needs and types of hair extensions. Customized wigs and hair extensions are often made by hand tying strands on threads. Various techniques are used to tie hair on threads. Hand tying allows to prepare base materials thoroughly and delicately and the further product strength mostly depends on tying technique. Two techniques of hand tying – one-turn and two-turn weft – vary in thickness and strength. The technique when strands are sewn in two turns on three threads is preferably chosen to make high quality endurable wigs and hair extensions.

Machine Sewn Hair Wefts

Wefts are machine sewn in large-scale production. Machine technique of weft sewing accelerates tying process considerably and is much cheaper. Weft thickness may vary in case of machine sewing as well. When buying such wefts the close attention should be paid to sewing quality. Machine sewn weft made by a skilled craftsman will last longer and will not differentiate from your own original hair. Price of machine sewn weft is the second thing to think over when buying high-quality machine sewn wefts for wig making.
